EDUCATION

California State University - Fullerton

Bachelors of Science in Computer Science

August 2018 – May 2022

Fullerton, California

SUMMARY

Abhinav Arora is an agile software engineer, specializing in databases, PHP, Javascript and Python with proven ability to optimize the performance of back-end, and cloud based infrastructure. A respected industry track record of effectively diagnosing and resolving complex database operations, and managing web-Servers hosted on cloud environments. With years of experience in production debugging and providing real-time customer solutions.

TECHNICAL SKILLS

- Oracle, mySQL, Javascript, Python, Laravel, DB2, AWS, Azure, Vue, React, Git, HTML ,CSS ,DevOps, Django, PHP, T-SQL, C++, Qlik, Jenkins, Docker.

EXPERIENCE

Software Engineer | Bega North America | Carpinteria, California

June 2022 - Present

- Improved user authentication speed by 25% by optimizing OAuth2 flows and implementing JWT within the client PHP Laravel web application.
- Led the migration of legacy Qlik on-premise infrastructure to Qlik Cloud and implemented real-time data warehousing solution on AWS redshift.
- Boosted system scalability by redesigning architecture with microservices, using Kubernetes for orchestration and Docker for containerization.
- Established role-based access control policies on SQL server, ensuring correct access levels and reducing unauthorized access attempts by 25%.
- Spearheaded the integration of AI and machine learning chatbots into Qlik Dashboards, enhancing data functionality and user experience
- Designed and optimized database schemas to support scalable and efficient data storage, reducing data retrieval times by 40% in the ERP portal.
- Developed an EDI portal on AWS EC2 with Amazon RDS, automating the 3-way matching process and increasing transaction efficiency by 15%.
- Streamlined an automated backup and disaster recovery solution with 99.99% data availability and reducing recovery time by 70% on Azure.
- Architected and developed RESTful APIs using the Django REST framework, achieving a 30% increase in data transfer efficiency.

Software Engineering Intern | Solar Insure Inc. | Costa Mesa, California

January 2022 - May 2022

- Developed and integrated RESTful APIs using Flask and PHP, reducing data retrieval times by 30% and enhancing efficiency of the web portal.
- Engineered a secure user authentication login using Flask and PHP, incorporating JWT and OAuth2.0, reducing unauthorized access by 22%.
- Deployed a Web Application Firewall to filter HTTP requests, blocking malicious traffic and reducing SQL injection attempts by 30%.
- Integrated Salesforce API to retrieve and display customer claims data, enabling real-time synchronization between Salesforce and web portal.
- Engineered secure RESTful APIs with Flask, integrating CSRF tokens to safeguard against cross-site request forgery.

Javascript Developer | California State University Fullerton | Fullerton, California

September 2021 – January 2022

- Developed a custom PHP web-portal with a React frontend, integrating AI/ML virtual agent-mentors for a University Career Fair chatbot.
- Integrated AJAX to load content dynamically without refreshing the page, reducing server load by 20% and enhancing user experience.
- Implemented Redux for efficient state management, reducing bugs and inconsistencies by 30% and enhancing application stability.
- Automated real-time data fetching and updates using React hooks and WebSockets, reducing data latency by 60% and improving UI/UX scores.
- Conducted a thorough assessment of the SQL Server database performance using monitoring tools and performance analyzers like SQL Sentry.

Information Technology Intern | Sensorex | Garden Grove, California

August 2021 – December 2021

- Engineered a new invoice processing feature using Laravel and Vue.JS, cutting processing times by 40% and improving financial operations.
- Implemented user authentication and authorization with Flask-Security and AJAX, ensuring secure access and data protection.
- Handled visual, responsive implementation of front-end features which resulted in a raise in dwell time by 30%.
- Partitioned large SQL tables to improve data loading and querying efficiency, and optimized ETL processes to enhance query performances.
- Improved system uptime from 95% to 99.9% using Azure SQL Managed Instance's Automatic Tuning for reliable high-traffic performance.

Student Software Developer | California State University Fullerton | Fullerton, California

March 2021 – May 2022

- Implemented interaction between frontend and backend using the JSON object at the University Data Center.
- Reduced deployment time by almost 100 seconds by developing bash scripts to automate build and deployment on Ubuntu servers.
- Debugged production bugs, and deployed live fixes on linux servers, to maintain a 24/7 University IT infrastructure.

Associate Software Developer | EZ Health-Track | Foster City, California

August 2020 - December 2020

- Optimized ETL processes using SSIS, improving data processing speed by 50% and ensuring data accuracy and consistency.
- Engineered efficient stored procedures to handle scalability, improving processing speed by 50% and reducing error rates by 30%.

Research Student Assistant | California State University Fullerton | Fullerton, California

June 2019 – August 2020

- Enhanced data models and algorithms for efficient SQL queries, improving data retrieval and analysis from the Azure Data Lake.
- Revamped ETL processes using SSIS to extract, transform, load data into the analytical data models, and detailed logging of execution metrics.

Information Technology Student Assistant | California State University Fullerton | Fullerton, California

May 2019 – August 2019

- Utilized PHPUnit for comprehensive unit testing on PHP web servers, achieving 85% test coverage and reducing frontend bugs by 40%.
- Designed standard operating procedures for database administration and troubleshooting processes to ensure continuous knowledge transfer.

BOARD POSITION

ACM External Vice President

May 2020 – May 2021

- Handled professional outreach tasks to build relationships with companies and planned professional events.
- Lead Product Tank Events which focused on networking events with Alumni working in the Product management roles.

CERTIFICATIONS

- IBM - Enterprise Design Thinking Practitioner.

August 2021–Present

PERSONAL PROJECTS

Aurora

November 2022– March 2024

- Developed and deployed a cloud-native venture trading capital portfolio management application using Python and Django, hosted on AWS EC2.
- Facilitated over 50 successful connections between founders and investors within the first six months of Initial release in late 2023.

Zero-Trust Application Access Platform

October 2022– September 2023

- Created a Docker container remote access platform using Zero-Trust Security framework and Network Hole punching.
- Built Vue frontend, connected to Go backend via NGINX, generated Swagger documentation, and automated CI/CD using GitHub Actions.
